Skills

Platforms	Android, iOS, Backend
Languages	Kotlin, Java, Swift, Objective-C, JavaScript, TypeScript, SQL, Dart, HTML, CSS
Architecture & Practices	SOLID, Clean Architecture, Vertical Slice Architecture, Screaming Architecture, Functional and Reactive Programming, VIPER, Redux, MV (MVC/MVP/MVVM), TDD, CI/CD
Soft Skills	Leadership, Problem Solving, Adaptability, Communication, Continuous Learning

Impact

- Helped ship and maintain telecom apps at 10M+ installs across multilingual markets.
- Led Java to Kotlin migrations and modularization to boost developer velocity and stability.
- Built a ride-hailing app from 0 to 500k+ downloads with an emergency livestream safety feature.
- Delivered critical fintech flows: onboarding, account dashboards and graphs, transfers, digital account opening.

Work Experience

Senior Mobile Engineer - RedAirship Pte Ltd (Singapore)

Jun 2021 - Present

- Spearheaded the development of a new mobile banking app for a major Singaporean bank from inception, ensuring feature parity across iOS and Android.
- Built critical features including onboarding, bank accounts list, account dashboard with graphs, funds transfer, and digital account opening.
- Integrated and customized a third-party SDK, performing deep technical liaison and debugging for seamless app performance.
- Delivered an on-time launch through technical leadership and cross-team coordination.

Lead Developer - InnovationTeam (MySTC - Saudi Telecom)

May 2020 - Jun 2021

- Led offshore development for MySTC, a telecom self-service app with 10M+ downloads.
- Implemented Clean Architecture and MVVM with RxJava and RxKotlin, improving maintainability and velocity.
- Mentored engineers in best practices, raising code quality and productivity.
- Delivered multi-language (English and Arabic) support and stability improvements that enhanced customer satisfaction.

Team Lead - iPARA Technologies and Solutions (OWTO Ride-Hailing)

Jun 2018 - May 2020

- Managed and built OWTO, a Philippine ride-hailing platform (Android and iOS), scaling it from 0 to 500K+ downloads.
- Architected app with Uber's RIB for modular, scalable code.
- Introduced an emergency livestream feature for driver and rider safety.
- Coordinated mobile and backend teams for real-time tracking, secure payments, and seamless integration.

Senior Android Developer - YOYO Holdings Pte. Ltd. (PopSlide App)

Jun 2016 - Jun 2018

- Led Android development for PopSlide, a rewards app with 1M+ downloads across Southeast Asia.
- Migrated large parts of the codebase from Java to Kotlin, improving stability and maintainability.
- Optimized API integrations and caching, reducing load times and boosting retention.
- Ensured consistent user experience across Android, iOS, and backend services.

Full-Stack Web and Mobile Developer - ISBX

May 2014 - Jun 2016

- Contributed to WebSafety, a parental control platform spanning Android, iOS, and Web.
- Delivered full-stack features (mobile UI, backend logic, integrations).
- Navigated multiple codebases and stacks, demonstrating versatility and adaptability.

Additional Projects and Initiatives

- Haven Protocol (Decentralized Social Platform): Built off-chain infrastructure for blockchain-based social space.
- Project BASS (Volunteer Android App): Crowdsourced cellular signal quality data; contributed open-source code.
- Map Radius Marker Builder (Library): Open-source Kotlin library for Google Maps (radius drawing utilities).
- Portable Aircon (Meme App): Fun solo project highlighting creativity and full-cycle app publishing.
