[professional_summary]

AI-accelerated developer with deep platform knowledge and 10+ years of experience shipping production systems across crypto, fintech, streaming, telecom, transport, rewards, safety, and e-commerce. Strong in Kotlin, Jetpack Compose, mobile architecture, performance tuning, release hardening, and third-party integrations. Known for high-output execution, strong engineering judgment, and moving effectively across Android, iOS, backend, product, and design to ship reliable user-facing systems.

[FOCUS_AREAS]

High-output execution loops with AI assistance

Deep platform knowledge across Android, iOS, and backend

Architecture leadership and fast, reliable delivery

Fintech-grade quality controls and release hardening

[career_trajectory]

Experience

Senior Software Engineer

JUN 2024 — PRESENT

Bitcoin.com

BITCOIN.COM WALLET — SELF-CUSTODY CRYPTO WALLET

Solve correctness and reliability problems across multichain transactions, Earn and rewards, routing, and deep links by tracing behavior end to end across UI, domain, APIs, and shared native layers.

Modernize a large Android wallet through API migrations, shared Rust and Uniffi integration, and design-system adoption while preserving established product behavior.

Carry changes through focused regression tests, emulator proof, CI and build hardening, code review, and release-candidate delivery.

Senior Mobile Developer

JUN 2023 — JUN 2024

Candyspace

ITVX — STREAMING PLATFORM

Worked on the Android media player for ITVX live and on-demand streaming.

Shipped player behavior and reliability improvements inside a large production streaming platform.

Collaborated within the media player team to deliver maintainable Android changes across core playback experiences.

Senior Android Developer

JUN 2021 — JUN 2023

Red Airship

OCBC — MOBILE BANKINGOPENPAY — FINTECH

Built and launched OCBC Business mobile banking flows spanning onboarding, account dashboards, transfers, and digital account opening.

Integrated third-party SDKs, refactored selected modules to reduce coupling, and improved unit-test coverage for critical fintech flows.

Improved OpenPay checkout reliability, UI responsiveness, partner-integrated payment flows, and release hardening.

Lead Developer

MAY 2020 — JUN 2021

InnovationTeam

MYSTC — TELECOM PROJECT

Led an offshore team of five senior Android engineers on MySTC, serving 10M+ installs across multilingual customer journeys.

Drove Clean Architecture and MVVM adoption with RxJava and RxKotlin, improving modular boundaries and release confidence.

Delivered performance, stability, and data synchronization improvements across account, ordering, and support flows.

Team Lead

JUN 2018 — MAY 2020

iPARA Technologies and Solutions

OWTO — RIDE-HAILING SERVICE

Led cross-functional delivery across Android, iOS, and backend for a ride-hailing platform that grew to 500K+ downloads.

Architected the mobile app with Uber RIB-inspired patterns to support modular growth and clearer ownership boundaries.

Improved booking reliability, payment-path handling, and backend API coordination for real-time transport flows.

Senior Android Developer

JUN 2016 — JUN 2018

YOYO Holdings Pte. Ltd.

POPSLIDE — REWARDS PLATFORM

Led Android development for a rewards app with 1M+ downloads across Southeast Asia.

Migrated large Java surfaces to Kotlin, reduced regressions in fragile areas, and shipped safer feature rollouts through A/B testing and guardrails.

Improved API and caching behavior while keeping monetization-critical lockscreen and notification surfaces stable.

Full-Stack Web and Mobile Developer

MAY 2014 — JUN 2016

Internet Strategy Branding and Execution (ISBX)

WEBSAFETY — PARENTAL CONTROLS

Delivered end-to-end features for WebSafety across Android, iOS, web, and backend systems.

Worked through undocumented Android APIs, GPS and sync reliability, and security-sensitive feature requirements.

Helped ship a robust parental-controls platform with stronger operational and compliance posture.

[selected_projects]

Projects

Bitcoin.com Wallet

Self-custody wallet delivery across multichain transactions, Earn and rewards, API migrations, shared Rust and Uniffi, reliability, and release hardening.

[SELF_CUSTODY]

ITVX

Android media-player work on ITVX at Candyspace, focused on live and on-demand playback behavior, reliability, and maintainable delivery.

[STREAMING]

OCBC

Mobile banking delivery for a major Singaporean bank, including onboarding, account dashboards, transfers, digital account opening, and guarded third-party SDK integration.

[FINTECH]

OpenPay

Fintech checkout, spending-limit, performance, and partner-integration work with an emphasis on reliable payment completion and release hardening.

[PAYMENTS]

MySTC

Telecom-scale Android product serving 10M+ installs, where I led a team of five senior engineers and drove modular, multilingual stability improvements.
