[professional_summary]

AI-native software engineer with deep platform knowledge and 10+ years of experience shipping production systems across crypto, fintech, streaming, telecom, transport, rewards, safety, and e-commerce. Strong in Kotlin, Jetpack Compose, mobile architecture, performance tuning, release hardening, and third-party integrations. Known for agent-first execution, strong engineering judgment, and moving effectively across Android, iOS, backend, product, and design to ship reliable user-facing systems.

[FOCUS_AREAS]

Agent-first execution with evidence-backed verification

Deep platform knowledge across Android, iOS, and backend

Architecture leadership and fast, reliable delivery

Fintech-grade quality controls and release hardening

[career_trajectory]

Experience

AI-Native Software Engineer

JUN 2024 — PRESENT

Bitcoin.com

BITCOIN.COM WALLET — SELF-CUSTODY CRYPTO WALLET

- Led the foundation and first end-to-end Android implementation of a multichain rewards platform, then built reward-backed crypto market predictions and moved their service layer into shared Rust through Uniffi.
- Co-built Bitcoin replace-by-fee with fee-aware UTXO validation, speed-up/cancel flows, reusable transaction preparation and signing, opt-out controls, and dust protection; led an in-app single-chain-to-multichain wallet migration.
- Modernized staking and liquidity-reward pool reads from legacy RPC to typed REST, shipped provider-aware swap routing and recurring-buy reminders, and hardened startup, native builds, CI, and Android releases.

Senior Mobile Developer

JUN 2023 — JUN 2024

Candyspace

ITVX — STREAMING PLATFORM

- Built a recommendations panel that appears during playback, coordinating its animations with player-control and button movement across phone and tablet layouts.
- Independently delivered timeline scrubbing with a visual preview so viewers could see where playback would land before seeking.
- Fixed long-standing player issues and improved reliability with stronger error tracking, security fixes, and a Simple XML-to-Jackson migration.

Senior Android Developer

JUN 2021 — JUN 2023

Red Airship

OCBC — MOBILE BANKING OPENPAY — FINTECH

- Built and launched OCBC Business mobile banking flows spanning onboarding, account dashboards, transfers, and digital account opening.
- Integrated third-party SDKs, refactored selected modules to reduce coupling, and improved unit-test coverage for critical fintech flows.
- Improved OpenPay checkout reliability, UI responsiveness, partner-integrated payment flows, and release hardening.

Lead Developer

MAY 2020 — JUN 2021

InnovationTeam

MYSTC — TELECOM PROJECT

- Led an offshore team of five senior Android engineers on MySTC, serving 10M+ installs across multilingual customer journeys.
- Drove Clean Architecture and MVVM adoption with RxJava and RxKotlin, improving modular boundaries and release confidence.
- Delivered performance, stability, and data synchronization improvements across account, ordering, and support flows.

Team Lead

JUN 2018 — MAY 2020

iPARA Technologies and Solutions

OWTO — RIDE-HAILING SERVICE

- Led cross-functional delivery across Android, iOS, and backend for a ride-hailing platform that grew to 500K+ downloads.
- Architected the mobile app with Uber RIB-inspired patterns to support modular growth and clearer ownership boundaries.
- Improved booking reliability, payment-path handling, and backend API coordination for real-time transport flows.

Senior Android Developer

JUN 2016 — JUN 2018

YOYO Holdings Pte. Ltd.

POPSLIDE — REWARDS PLATFORM

- Led Android development for a rewards app with 1M+ downloads across Southeast Asia.
- Migrated large Java surfaces to Kotlin, reduced regressions in fragile areas, and shipped safer feature rollouts through A/B testing and guardrails.
- Improved API and caching behavior while keeping monetization-critical lockscreen and notification surfaces stable.

Full-Stack Web and Mobile Developer

MAY 2014 — JUN 2016

Internet Strategy Branding and Execution (ISBX)

WEBSAFETY — PARENTAL CONTROLS

- Delivered end-to-end features for WebSafety across Android, iOS, web, and backend systems.
- Worked through undocumented Android APIs, GPS and sync reliability, and security-sensitive feature requirements.
- Helped ship a robust parental-controls platform with stronger operational and compliance posture.

[selected_projects]

Projects

Bitcoin.com Wallet

Self-custody systems across multichain rewards, market predictions, Bitcoin transaction replacement, staking and liquidity pools, swaps, recurring-buy reminders, wallet migration, and shared Rust through Uniffi.

[SELF_CUSTODY]

ITVX

Playback feature work on ITVX at Candyspace: in-player recommendations, independently delivered preview timeline scrubbing, tablet support, stronger error tracking, security fixes, and a Simple XML-to-Jackson migration.

[STREAMING]

OCBC

Mobile banking delivery for a major Singaporean bank, including onboarding, account dashboards, transfers, digital account opening, and guarded third-party SDK integration.

[FINTECH]

OpenPay

Fintech checkout, spending-limit, performance, and partner-integration work with an emphasis on reliable payment completion and release hardening.

[PAYMENTS]

MySTC

Telecom-scale Android product serving 10M+ installs, where I led a team of five senior engineers and drove modular, multilingual stability improvements.
