[mission_brief]

AI-native software engineer with 10+ years shipping production systems across crypto, fintech, streaming, telecom, transport, rewards, safety, and e-commerce. Recent work spans multichain wallet rewards and transactions, shared Rust services through UniFFI, and Android release hardening; earlier roles include ITVM playback and leading five senior Android engineers on MySTC. Kotlin and Jetpack Compose are home turf, with hands-on delivery across iOS, backend, product, and design.

[systems_register]

Core systems

[ANDROID]

Kotlin, Java, Jetpack Compose, XML layouts, Android SDK, Coroutines, Flow, RxJava, RxKotlin

[ARCHITECTURE]

Clean Architecture, MVVM, Modularization, SDK integration, Unit testing, CI/CD, Release hardening, Performance tuning

[CROSS_PLATFORM_ADJACENT]

Compose Multiplatform, Kotlin Multiplatform, Rust, UniFFI, SwiftUI, Swift, Firebase, Retrofit, SQLite, REST APIs

Experience recorder

Evidence key: A public product listing confirms public availability; a first-person project note is my account of the work; and “Source implementation private” means the underlying code is not publicly inspectable.

Unlinked scale figures are historical product-scale figures from the period of my work.

JUN 2024 — PRESENT

AI-Native Software Engineer

Bitcoin.com

[BITCOIN.COM WALLET](#) — [SELF-CUSTODY CRYPTO WALLET](#)

[PUBLIC PRODUCT LISTING](#) [SOURCE IMPLEMENTATION PRIVATE](#)

- Led the foundation and first end-to-end Android implementation of a multichain rewards platform, then built reward-backed crypto market predictions and moved their service layer into shared Rust through UniFFI.
- Co-built Bitcoin replace-by-fee with fee-aware UTXO validation, speed-up/cancel flows, reusable transaction preparation and signing, opt-out controls, and dust protection; led an in-app single-chain-to-multichain wallet migration.
- Modernized staking and liquidity-reward pool reads from legacy RPC to typed REST, shipped provider-aware swap routing and recurring-buy reminders, and hardened startup, native builds, CI, and Android releases.

JUN 2023 — JUN 2024

Senior Mobile Developer

Candyspace

[ITVX](#) — [STREAMING PLATFORM](#)

[PUBLIC PRODUCT LISTING](#) [SOURCE IMPLEMENTATION PRIVATE](#)

- Built a recommendations panel that appears during playback, coordinating its animations with player-control and button movement across phone and tablet layouts.
- Independently delivered timeline scrubbing with a visual preview so viewers could see where playback would land before seeking.
- Fixed long-standing player issues and improved reliability with stronger error tracking, security fixes, and a Simple XML-to-Jackson migration.

JUN 2021 — JUN 2023

Senior Android Developer

Red Airship

[OCBC](#) — [MOBILE BANKING](#) [OPENPAY](#) — [FINTECH](#)

[FIRST-PERSON PROJECT NOTE · OCBC](#) [FIRST-PERSON PROJECT NOTE · OPENPAY](#) [SOURCE IMPLEMENTATION PRIVATE](#)

- Built and launched OCBC Business mobile banking flows spanning onboarding, account dashboards, transfers, and digital account opening.
- Integrated third-party SDKs, refactored selected modules to reduce coupling, and improved unit-test coverage for critical fintech flows.
- Improved OpenPay checkout reliability, UI responsiveness, partner-integrated payment flows, and release hardening.

MAY 2020 — JUN 2021

Lead Developer

InnovationTeam

MYSTC — TELECOM PROJECT

[FIRST-PERSON PROJECT NOTE · MYSTC](#) [SOURCE IMPLEMENTATION PRIVATE](#)

- Led an offshore team of five senior Android engineers on MySTC, serving 10M+ installs across multilingual customer journeys.
- Drove Clean Architecture and MVVM adoption with RxJava and RxKotlin, improving modular boundaries and release confidence.
- Delivered performance, stability, and data synchronization improvements across account, ordering, and support flows.

JUN 2018 — MAY 2020

Team Lead

iPARA Technologies and Solutions

OWTO — RIDE-HAILING SERVICE

[FIRST-PERSON PROJECT NOTE · OWTO](#) [SOURCE IMPLEMENTATION PRIVATE](#)

- Led cross-functional delivery across Android, iOS, and backend for a ride-hailing platform that grew to 500K+ downloads.
- Architected the mobile app with Uber RIB-inspired patterns to support modular growth and clearer ownership boundaries.
- Improved booking reliability, payment-path handling, and backend API coordination for real-time transport flows.

JUN 2016 — JUN 2018

Senior Android Developer

YOYO Holdings Pte. Ltd.

POPSLIDE — REWARDS PLATFORM

[FIRST-PERSON PROJECT NOTE · POPSLIDE](#) [SOURCE IMPLEMENTATION PRIVATE](#)

- Led Android development for a rewards app with 1M+ downloads across Southeast Asia.
- Migrated large Java surfaces to Kotlin, reduced regressions in fragile areas, and shipped safer feature rollouts through A/B testing and guardrails.
- Improved API and caching behavior while keeping monetization-critical lockscreen and notification surfaces stable.

MAY 2014 — JUN 2016

Full-Stack Web and Mobile Developer

Internet Strategy Branding and Execution (ISBX)

WEBSAFETY — PARENTAL CONTROLS

[FIRST-PERSON PROJECT NOTE · WEBSAFETY](#) [SOURCE IMPLEMENTATION PRIVATE](#)

- Delivered end-to-end features for WebSafety across Android, iOS, web, and backend systems.
- Worked through undocumented Android APIs, GPS and sync reliability, and security-sensitive feature requirements.
- Helped ship a robust parental-controls platform with stronger operational and compliance posture.
