Dear Hiring Team,

I am writing to express interest in software engineering opportunities where strong product delivery, technical ownership, and mobile depth matter. I am an AI-accelerated developer with deep and extensive platform knowledge and more than 10 years of experience shipping production systems across fintech, telecom, transport, rewards, safety, and e-commerce. My strongest background is in Kotlin, Android, and modern mobile architecture, while my delivery scope has consistently extended across iOS, backend coordination, release quality, and close collaboration with product and design.

Most recently, I served as Lead Android Developer at Littlepay, where I led Android delivery and technical direction, worked closely with product, design, and backend stakeholders, and pushed for maintainable, testable code with strong release confidence. Before that, at RedAirship, I helped build and launch a mobile banking app for a major Singaporean bank, delivering onboarding, account dashboards, transfers, and digital account opening with Android and iOS feature parity. I also led Android delivery on MySTC at telecom scale and contributed across Android, iOS, and backend systems on OWTO as the platform scaled to more than 500K downloads.

What I bring is a mix of speed, ownership, and engineering discipline. I use AI tools productively, but I pair that speed with sound technical judgment, clean architecture, performance tuning, release hardening, and strong execution under production constraints. I am comfortable leading teams, mentoring engineers, driving architecture decisions, and moving across implementation and delivery responsibilities wherever the work needs momentum.

I am looking for opportunities where I can contribute as someone who can ship quickly, raise technical quality, and take ownership of user-facing systems from design through release. I work well in environments that value practical engineering, strong collaboration, and people who can move work forward without losing technical rigor.

I would welcome the opportunity to discuss how my experience can support your team. Thank you for your time and consideration.

Sincerely,

A-Ar Andrew V. Concepcion
