[professional_summary]

AI-accelerated developer with deep platform knowledge and 10+ years of experience shipping production systems across fintech, telecom, transport, rewards, safety, and e-commerce. Strong in Kotlin, Jetpack Compose, mobile architecture, performance tuning, release hardening, and third-party integrations. Known for high-output execution, strong engineering judgment, and moving effectively across Android, iOS, backend, product, and design to ship reliable user-facing systems.

[FOCUS_AREAS]

High-output execution loops with AI assistance

Deep platform knowledge across Android, iOS, and backend

Architecture leadership and fast, reliable delivery

Fintech-grade quality controls and release hardening

[career_trajectory]

Experience

Lead Android Developer

DEC 2025 — MAY 2026

Littlepay

Led Android delivery and technical direction for Littlepay mobile initiatives.

Worked across product, design, and backend stakeholders to keep implementation quality, release confidence, and user-facing reliability high.

Guided architecture and code quality decisions with an emphasis on maintainable, testable Android code.

Senior Mobile Engineer

JUN 2021 — DEC 2025

RedAirship Pte Ltd

Built and launched a new mobile banking app for a major Singaporean bank, shipping onboarding, account dashboard graphs, transfers, and digital account opening with Android and iOS feature parity.

Integrated third-party SDKs, refactored selected modules to reduce coupling, and improved unit-test coverage for critical fintech flows.

Improved checkout reliability, UI responsiveness, and release hardening on openpay, and shipped production fixes and features for Solo's whitelabel delivery brands.

Lead Developer

MAY 2020 — JUN 2021

InnovationTeam (MySTC, Saudi Telecom)

Led an offshore team of five senior Android engineers on MySTC, serving 10M+ installs across multilingual customer journeys.

Drove Clean Architecture and MVVM adoption with RxJava and RxKotlin, improving modular boundaries and release confidence.

Delivered performance, stability, and data synchronization improvements across account, ordering, and support flows.

Team Lead

JUN 2018 — MAY 2020

iPARA Technologies and Solutions (OWTO)

Led cross-functional delivery across Android, iOS, and backend for a ride-hailing platform that grew to 500K+ downloads.

Architected the mobile app with Uber RIB-inspired patterns to support modular growth and clearer ownership boundaries.

Improved booking reliability, payment-path handling, and backend API coordination for real-time transport flows.

Senior Android Developer

JUN 2016 — JUN 2018

YOYO Holdings Pte. Ltd. (PopSlide)

Led Android development for a rewards app with 1M+ downloads across Southeast Asia.

Migrated large Java surfaces to Kotlin, reduced regressions in fragile areas, and shipped safer feature rollouts through A/B testing and guardrails.

Improved API and caching behavior while keeping monetization-critical lockscreen and notification surfaces stable.

Full-Stack Web and Mobile Developer

MAY 2014 — JUN 2016

Internet Strategy Branding and Execution (ISBX)

Delivered end-to-end features for WebSafety across Android, iOS, web, and backend systems.

Worked through undocumented Android APIs, GPS and sync reliability, and security-sensitive feature requirements.

Helped ship a robust parental-controls platform with stronger operational and compliance posture.

[selected_projects]

Projects

OCBC

Mobile banking delivery for a major Singaporean bank, including onboarding, account dashboards, transfers, digital account opening, and guarded third-party SDK integration.

[FINTECH]

MySTC

Telecom-scale Android product serving 10M+ installs, where I led a team of five senior engineers and drove modular, multilingual stability improvements.

[TELECOM_SCALE]

OWTO

Ride-hailing platform work across Android, iOS, and backend delivery, improving booking reliability, payment-path handling, API contracts, and release ownership as the product scaled to 500K+ downloads.
